

SMART CITY Packages

Technology & Software that drastically changes how management is carried out

SOFTWARE & APPS

Choose from a diverse list of software applications:

ESDN

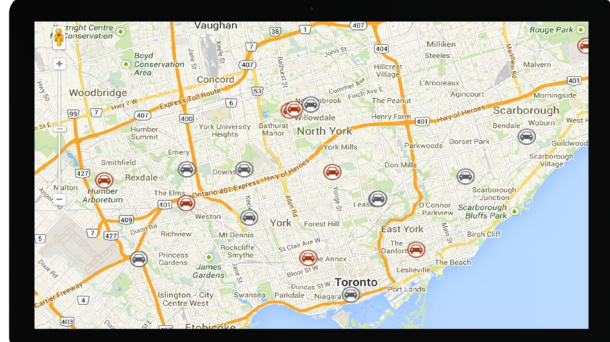

Full Fledge Web-GIS

ESDN (Electronic Spatial Data Network) is a flexible and expandable GIS developed on .NET technology with a rich API for application development.

Features:

- Integrate information & data
- Perform advanced analysis
- Communicate more effectively
- Improve data accuracy on devices
- Provide access to geospatial data

Space Compass

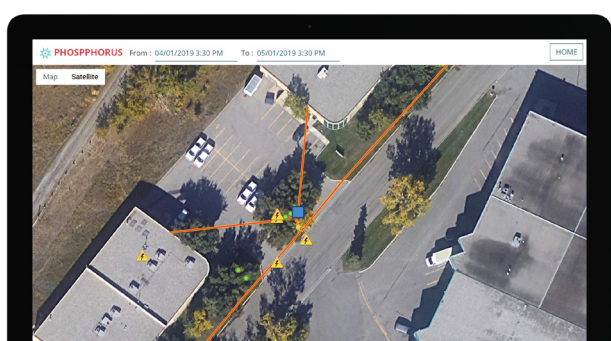

Mobile Asset Management

A full-scale Mobile Asset Management system that enables real time tracking based on GPS and projecting the geo-positioning of field mobile assets.

Features:

- Real time vehicle/personnel tracking
- Details on distance, time and speed
- Identify downtime and irrelevant travel
- Cost efficient solution for field operations
- Field data and statistics for logistics

Phosphorus

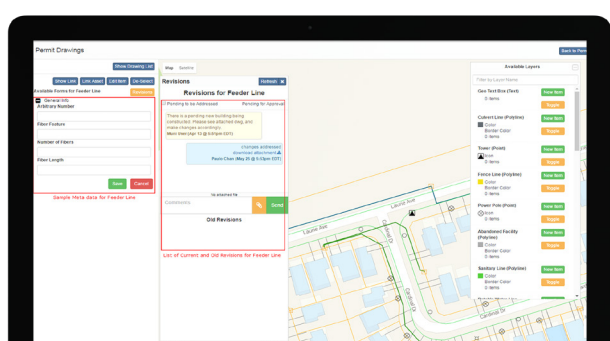

Urban Utility Asset Management

Phosphorus is a sophisticated geospatial infrastructure network management & monitoring system, which provides monitoring of various assets/networks.

Features:

- Utility sensor detection
- Integrity management
- Geospatial asset management
- Damage prevention & detection
- Quick dispatch of repairs

INTUSLink

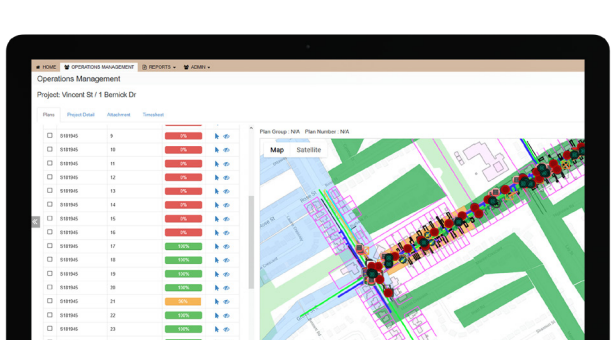

Work Order/ Project Management

IntusLink is a web-based, GIS enabled, full scale business management ERP and Asset Management system, work order management and real time field reporting tool.

Features:

- Work orders for all types of projects
- Covers all aspects of maintenance
- Advances pre-engineering
- Assists with network design & permitting
- Manage assets through life-cycle

FiberLink

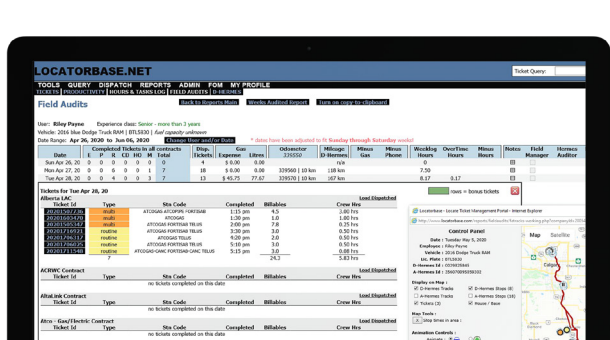

Fiber Project Management

FiberLink is a web-based, GIS enabled, ERP and Asset Management system, work order management and real time field reporting tool for Fiber construction.

Features:

- Pre-engineering & permitting
- Network design
- Construction & cost tracking
- Asset management & maintenance
- Network integrity & damage prevention

LocatorBase

Work Order/ Project Management

Online locate management portal that provides data, statistics, reporting, billing and auditing. Ticket clearing for locates and intelligent scheduling are bundled as well.

Features:

- Closed loop for locating operations
- Payroll, work audits, billing, and statistics
- Ticket scheduling, dispatching, reporting
- Access online at any time
- Fleet workorder management

24x7

Emergency Response

24x7 remote server is a server that provides all necessary data, communication and other information during time of an emergency.

Features:

- Augmented reality for emergencies
- Coordination center
- Immediately detects damage
- Create work orders
- Emergency Instructions
