

# ESDN WEB-GIS

Web-based Geographic Information System to access geospatial data

## ABOUT **ESDN**

A vital tool prerequisite for permitting of public works, such as FTTH, road construction etc. and provides infrastructure for protecting utility assets during construction (damage prevention). Web-based GIS system that enables cities to manage assets (underground and above-ground) in full compliance with EU INSPIRE program and absorption of EU Funding.

## MAIN **FEATURES**

### Asset Management

The best solution for documenting and visualizing infrastructure asset locations and connections.

### Permitting

Web-GIS allows for visualization, on-the-fly comments, changes and submissions from both the build team and engineers.

### Web-based

Users can access Web-GIS from any Smartpolis connected device.
